Project Overview

Radio Revolution

Genre: Action/Adventure, Music-Inspired Real-Time Strategy Game

Radio Revolution is the story of Melody, a radio DJ, music producer, and rising popstar. Set in a futuristic city, Melody uses her music to express herself and challenge authority. As books are being banned, news is being censored, and citizens are being silenced, Melody fights back the only way she knows how: through her music. Melody will have speakers that constantly play her music. The music can only be heard within a certain radius of the speaker. Individuals caught within the speaker radius can be manipulated by the music that Melody plays, like a mind control device. Join Melody as she broadcasts her own experimental tracks to gain fans, build a movement, and inspire a revolution against the oppressive regime.

Gameplay Loop

1

Melody explores the map and approaches civilians.

2

Civilians become enamored by her music, becoming her loyal fans, and following her.

3

Melody directs her fans to clear obstacles or subdue authority.

4

With obstacles cleared or authority subdued, she can advance through the level, attract more fans, take down larger enemies, and clear bigger, more complex obstacles.

Narrative

Protagonist

Radio Revolution puts players into the shoes of Melody, a fearless radio DJ, experimental music producer, and rising popstar living in Sector 7 of the divided nation, Virelia. Once a beacon of hope, prosperity, and economic opportunity, Virelia has since turned into an oppressive police state.

As books are being banned, news is being censored, and citizens are being silenced, Melody fights back the only way she knows how: through her music. Melody can compose music using certain frequencies that have magical effects on its listener, altering emotions and behavior.

Join Melody as she broadcasts her own experimental tracks to gain fans, build a movement, and inspire a revolution against the oppressive regime that Virelia enforces.

Narrative

Setting

Radio Revolution takes place in the future in the fictional nation of Virelia. Virelia was once a peaceful, democratic nation but the government now censors most free speech and expression to oppress citizens and keep them complacent to the military regime.

Citizens are punished for disobeying any commands given to them or for participating in activities that directly challenge the leaders of Virelia.

Virelia has allowed a tyrannical King to remain in power, but if Melody wants a chance at being a rising global pop sensation, she must overthrow the King that limits her rights and freedom of expression.

Visual Style

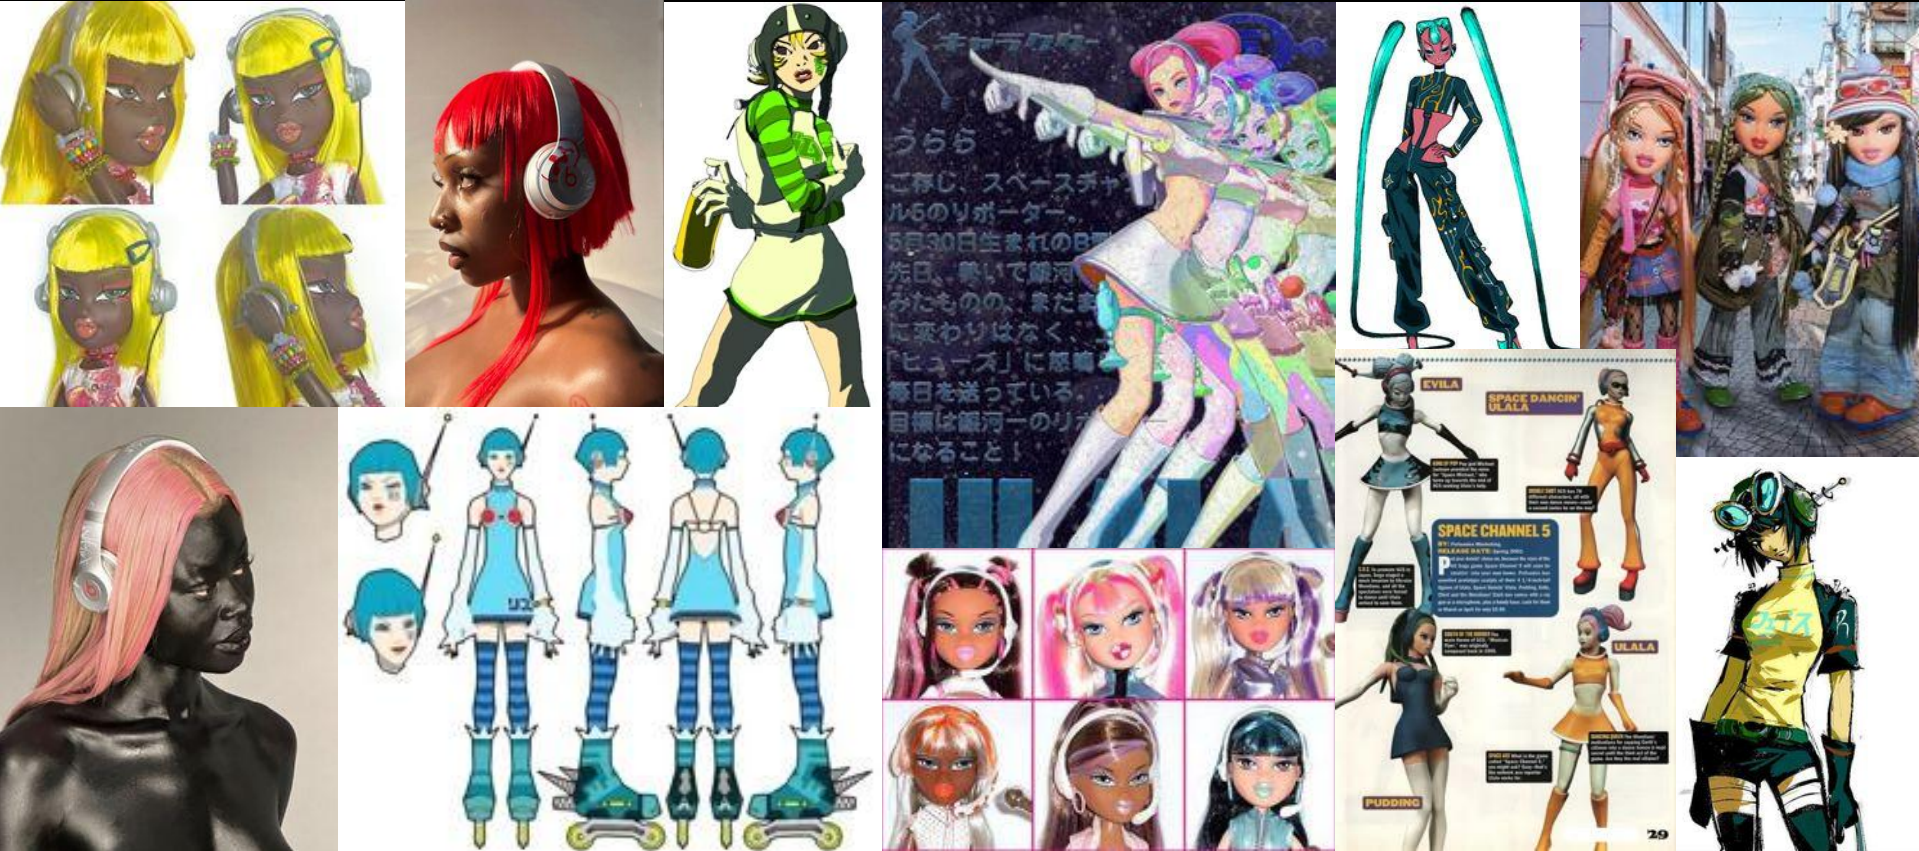

Overview

The world will be futuristic showcasing many brutalist buildings consisting of a grey and monotone color palette to reflect the government's oppression in society. The main characters, however, will be bright and colorful to contrast with the bleak environment. Over time, as you destroy the oppressive regime of the government, the world will begin to become colorful again and music will be heard on every street.

Melody is styled similar to Gen Z's Y2K revival, specifically a combination of Bimbocore and Aliyahcore. She has a common urban feminine silhouette. She wears a crop top with either a skirt and fur boots or baggy pants. Much of the visual "weight" is directed lower towards her shoes. Her outfit is very bright and colorful, similar to Decora fashion.

Character Moodboard

Environment Moodboard

Target Audience

Radio Revolution will appeal to players because of its strong audio identity, stylized gameplay, colorful characters and world-building and narrative elements in this universe. The inclusion of a strong and outspoken female protagonist who can weaponize her creativity to tear down oppressive systems in society will appeal to audiences who feel drawn to her cause and represented by her actions. The storyline in this game provides players with an outlet and catharsis for the political unrest in today's growing conservative and sometime's oppressive political climate.

Target Demographic

16-35

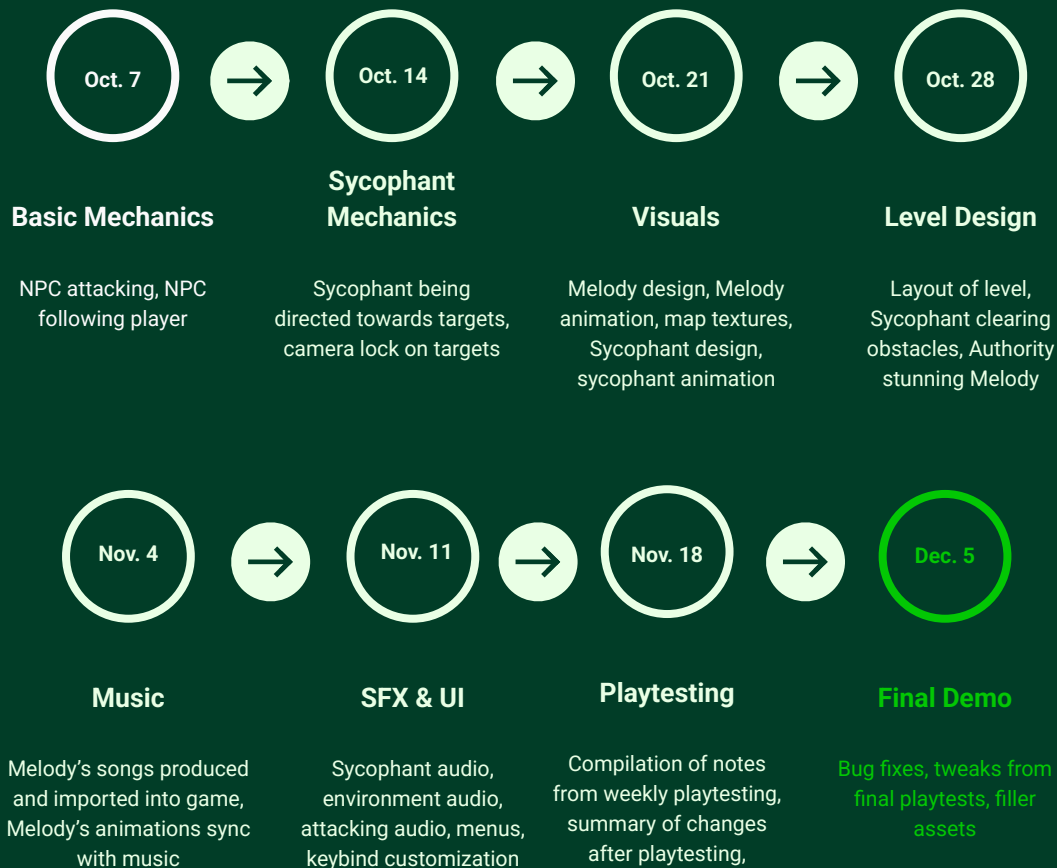

Target Age

Development Timeline

Resource Requirements

Hardware

The game will primarily be developed on Georgia State University's Creative Media Industries Institute computers. There are no additional hardware requirements outside of what is available to GSU students.

Software

Radio Revolution will be developed using Unreal Engine 5.6.1. Characters will be made using Character Creator. Characters will be animated using iClone 8. Version control will be managed using Diversion. All communication will take place in Microsoft Teams.

Budget

Radio Revolution will be developed without any funding.

Resource Requirements

Team Members

Level Designer

Character Designer

Programmer

Composer

Concept Artist

3D Modeler & Rigger

3D Animator

Sound Designer

Possible Challenges

Over Scoping

The team is small and comprised of college students who cannot dedicate most of their day to a sole class.

Our team plans to navigate this through proper communication, using as many premade assets as we can afford, and following our development schedule.

Losing Progress

Unreal Engine could crash, resulting in major loss of progress and assets.

We plan to navigate this by keeping our version of the project up to date using the version control software, Diversion.
