Game Developer / Gameplay Programmer

TECHNICAL SKILLS

Languages: C#, Java

Engines: Unreal Engine 5 (Blueprint), Unity (2D & 3D Development)

Gameplay Systems: AI Behavior Trees, NavMesh, State Machines, Player Controllers, Animation Systems

Graphics & Rendering: Unity Shader Development, Material Systems

3D & Asset Pipeline: Blender (Primary), Autodesk Maya (Basic), Asset Integration & Collision Setup

Build & Deployment: Windows PC Builds, Android Build Configuration

Development: Solo Game Development, Git, Visual Studio, VS Code

GAME PROJECTS

AI behavior (Radio revolution)– Unreal Engine 5

AI Systems Programmer | School Project | Arcade / 3D Platformer | Team of 8

- Developed AI Behaviors for companion, support, and enemy NPCs using Unreal Engine 5.
- Created healer and fighters AI behaviors with support-focused decision-making and player assistance mechanics.
- Designed multiple enemy archetypes including melee, ranged, and stun-based enemies with distinct combat behaviors.
- Worked on NPC state management, targeting systems, combat interactions, and navigation behaviors.
- Collaborated with a multidisciplinary team to integrate AI systems into gameplay and level design.

Hybrid 2D / 3D Gameplay System (DDImansion) – Unity

- School project where the player can switch between two perspectives: a 2D side-scroller view and a top-down isometric view.
- The gameplay focuses on using both perspectives to solve puzzles and progress through the levels. I worked on the gameplay systems and perspective-switching mechanics.
- it was developed for mobile and windows devices.

Dungeon procedural generation (Death is a bliss)– Unity

- School project where the player spawns inside a procedurally generated dungeon and must explore to find the exit leading to the boss room.
- I worked on the procedural dungeon generation system, room layout logic, enemy behavior and gameplay flow for exploration and progression.

EDUCATION

Georgia State University

B.A.S. Computer Game Programming (Expected Dec 2026)/A.S. Computer Science (May 2022)
